

AMENDMENTS TO THE CLAIMS:

1. (Currently Amended) A method for carbon nanotube emitter surface treatment, which is used on a carbon nanotube electronic source for increasing the number of carbon nanotubes exposed on a triode structure or other surface structure of a carbon nanotube field emission display (CNT-FED), the method for carbon nanotube emitter surface treatment comprising the steps of:
coating an adhesive material on the surface of said CNT-FED;
heating and melting said adhesive material for ~~adhering~~ attaching said adhesive material on a triode structure ~~the~~ surface of said CNT-FED; and
removing impurities on the surface of said CNT-FED by lifting said adhesive material off.
2. (Previously Presented) The method for carbon nanotube emitter surface treatment as claimed in claim 1, wherein said adhesive material is selected from the group consisting of a hot melt glue, a soluble material, an organic material, an inorganic material and a strippable material.
3. (Previously Presented) The method for carbon nanotube emitter surface treatment as claimed in claim 1, wherein said adhesive material sticks on said carbon nanotube electronic source.
4. (Previously Presented) The method for carbon nanotube emitter surface treatment as claimed in claim 3, wherein said carbon nanotube electronic source is set between a cathode plate and a gate in said triode structure.
